

Preventive Maintenance Optimization Process

What is PM Optimization?

Preventative maintenance optimization (PMO) is a seven-step process to evaluate preventive maintenance plans and determine their effectiveness.

The PMO process meets two needs of the RCM program:

1. After the RCM/FMEA process is applied to an asset, PMO ensures that current and new preventive/predictive maintenance plans (PMs) meet seven quality criteria
2. PMO requires that PMs are reviewed periodically and evaluated for improvement
